

Romal Mitr

Stanford University | (925) 549-4567 | romalm@stanford.edu | romalmitr@gmail.com

EDUCATION

Stanford University

B.S. Biomedical Computation (GPA: 4.04), Tau Beta Pi Engineering Honors Society September 2023 – June 2027
Skills: Programming (Python, C++, MATLAB, LaTeX), Applied Math (Multivariable Calculus, Linear Algebra, Modeling)

Oxford University

Study Abroad: ML Research on Cardiovascular Disease Prediction Via Wearable Health Data April 2025 – June 2025

Quarry Lane School (High School)

Valedictorian, National Merit Scholar, International Baccalaureate (IB) Diploma (GPA: 4.85 / 4) August 2019 – June 2023

ENTREPRENEURSHIP

Early-Stage Health Tech Start-Up

Co-Founder, CEO September 2024 – Present

- Building an AI companion tool to streamline post-hospital discharge for geriatric patients, reducing 30-day readmission rate by 45% and cutting costs for hospitals by 10%: <https://biodesign.stanford.edu/news---events/health-technology-showcase/continuum-improving-communication-across-the-continuum-of-care.html>
- Launching pilot QI study with Head of Geriatrics at Stanford; Received \$1000 from Stanford Center for Biodesign

“Reimagining Earth” Environmental Initiative

Founder (www.reimaginingearth.org/) September 2020 – December 2024

- Mapmaking: Charted 73 maps showcasing environmental trends to preserve biodiversity; Organized community "mapathons" (mapmaking marathons) by working with American Red Cross and Humanitarian OpenStreetMap Team
- Filmmaking: Created environmental documentary (screened at AMC Empire Theater – busiest movie theater in US)
- Gave TEDx Talk on how improving scientific communication increases accessibility of climate information: www.ted.com/talks/romal_mitr_reviving_earth_s_heartbeat_before_it_flatlines

LEADERSHIP

Stanford Consulting (Client: Google DeepMind)

Senior Consultant January 2025 – Present

- Formulated solutions to solve Google DeepMind's problem of the limited Gemini use on university campuses by conducting start-up landscaping on 100+ Stanford students to analyze AI usage trends

Stanford Healthcare Consulting Group

Consultant April 2024 – September 2024

- Developed 12 recommendations (that have since been adopted) for the implementation of CT-based opportunistic imaging to accelerate AI-driven malnutrition diagnoses at Stanford Hospital
- Presented study at Stanford's "Annual Lean Healthcare Academic Conference" & "Big Ideas in Medicine Conference"

EXPERIENCE

Siemens Healthineers

Oncotherapy Biomedical Intern June 2025 – August 2025

- Authored review paper on using adaptive radiotherapy with AI-enabled tumor-contouring to expedite surgery planning from 2-3 weeks to same-day treatment; Publication pending for how this process reduces time toxicity by over 90%

Oxford Internet Institute

Statistical & Machine Learning Researcher for Digital Health April 2025 – June 2025

- Designed a model with 83% accuracy for prediction of cardiovascular disease risk on dataset with patients' wearable data; Used ARMA models, K-means clustering and unsupervised learning to analyze the time series data

Rare Genomics Institute

Rare Disease Research Intern September 2020 – Present

- Pioneering the integration of STORM AI to double the pace at which the organization generates medical descriptions for rare conditions, helping provide patients with information about their medical condition and combat misinformation
- Authored over 35 medical synopses and moderated Rare Genomics podcast to help patients share journey

Stanford Snyder Lab

Research Intern in Department of Genetics June 2024 – March 2025

- Engineered a computational analysis and processing pipeline for untargeted metabolomics data from the Undiagnosed Disease Network (UDN) that helped solve 4 undiagnosed rare diseases cases
- Publication pending for novel benchmarking method involving systematic error removal using Random Forest
